

Product Introduction

- **CENTER GROOVES**

Two center grooves were carefully designed from data gathered during testing to quickly and efficiently disperse water for improved wet traction.

- **VARIABLE GROOVES**

There are two wing grooves at outside wall with different lengths and angle. Longer groove assists in water channeling and enhances cornering performance and aids in self-cleaning. Shorter groove enhances directional stability. Lightning grooves enhance lateral traction for maximum side bite.

- **SOLID CENTER RIB**

The addition of a solid center rib improves traction under acceleration by providing a consistent contact patch with the road.

- **SIDE DIMPLES**

Small dimples allow the drivers to easily check tire wear and the effective contact patch area.

- **News**

ZESTINO Color Smoke Tyres are ready for sales.
